

IN THE ABSTRACT:

Please substitute the following paragraph for the paragraph starting at page 26, line 2 and ending at line 17.

A micro liquid delivery device ~~comprises~~ includes a flow channel for flowing a liquid, at least two pressure-~~generators~~ generating means for generating pressures provided in the flow channel, and a variable member placed between the pressure-~~generators~~ generating means and capable of transforming between a first stable state and a second stable state by a generated pressure; ~~the device serving to select a~~ A branch of the flow channel is selected by transforming the variable member into the first stable state or the second stable state. A valve for changeover of flow channel branches ~~comprises~~ includes a variable member placed between a pressure-~~generator~~ generating means and transformable between a first stable state and a second stable state by a generated pressure, with the valve serving to select a branch of flow channel branches by the variable member.
